

What is the Total Revenue Comparison between IT and Financials for Year 1

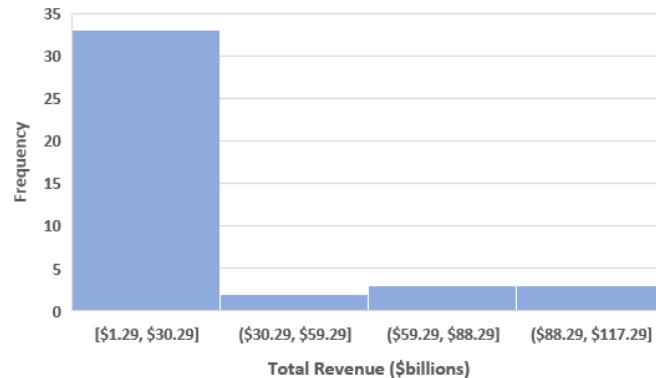

Total Revenue for IT for Year 1

The two histograms demonstrate the total revenue for all companies categorized under IT and Financial sectors for Year 1 respectively. It is clearly that both distributions are positively skewed, which means the mean value is higher than the median.

Based on the summary statistics computed, the mean total revenue for Financials (\$21,419,213,415) was higher than that for IT (\$15,546,943,136) - the companies in Financial industry generated higher total revenue on average than all IT companies in Year 1. Besides, more than 50% of Financial companies reported over \$10 billion total revenue for Year 1 (median equals \$10,259,000,000) which more than doubled the figure for IT (median equals \$4,436,000,000).

Total Revenue for Financials for Year 1

The standard deviation for IT (\$30,612,946,726) was slightly higher compared to that for Financials (\$27,925,314,901), which means the total revenue amounts for IT were more variable. Reported IT total revenue amounts were also more widely spread out with a much higher range value (\$170,036,408,000) compared to that for Financials (\$98,790,423,000).
